FOILBOARD® INSTALLATION GUIDE

To achieve maximum thermal performance and to ensure fast and simple installation of Foilboard® GREEN rigid insulation panel to concrete suspended slab, Foilboard Australia recommends the following method.
What do you need?

Use Foilboard® Standard Fasteners for GREEN 10 and GREEN 15 OR Foilboard® Ultra Fasteners for GREEN 20 and GREEN 25 (Use Timber or Steel fasteners depending on batten material)
Foilboard® Green or Sliver Joining tape

How to Install?

STEP 1 — Foilboard GREEN rigid insulation panel should be installed to the internal face of the concrete or batten, with the anti glare side facing out. Measure the area you require

STEP 2 — Mark the measurements out on the Foilboard GREEN rigid insulation panel, using the gridlines as a guide. Using a straight edge and a sharp blade/knife. cut the rigid panel to size
STEP 3 — Install full sheets to concrete floor with mechanical fasteners. Foilboard can be installed directly to the concrete or fixed to a batten

Pictured - Generic insulation fastener

STEP 4 — Fasten the insulation panel to the studwork with the Foilboard fasteners using approx. 5-6 per m2, use either a hammer or drill as required.

STEP 5 — Tape all penetrations, joints and gaps using Foilboard GREEN or SILVER tape

TOP TIPS

✓ Batten fixing will increase the thermal performance of the insulation by creating an airspace.

✓ Save time by starting with areas that can accommodate the full sheets.

✓ The Foilboard® GREEN antiglare is there to protect you. Both the antiglare and silver foil reflect heat.

It's the smarter way to insulate
